LETTER OF RECOMMENDATION

I am glad to recommend **Mr. Om Patel** to your Master's program. Over the past academic year, I have supervised Om in multiple roles: as an instructor in advanced classes in **Natural Language Processing** and **Artificial Intelligence & Machine Learning**, in his lab work, and in seminar participation. These interactions suggest that Om has considerable intellectual depth, sophisticated technical ability, and a strong commitment to advancing AI responsibly.

Om's growth as a researcher is best manifested in his term project. **He built an end-to-end application that listens to spoken words, converts them to text, automatically summarizes the content, and reads the summary out loud.** This required seamlessly stitching together a variety of hard technologies. He used OpenAI's Whisper for speech-to-text processing in a variety of audio conditions and designed information-extraction mechanisms that preserve core meaning. More importantly, his approach reflected careful consideration of practical challenges: mitigating poor audio quality, avoiding over-summarization that could obscure details, and addressing implementation obstacles that can hinder novice developers.

In a subsequent project, **Om employed machine learning to predict sleep apnea from medical measurements.** The real-world salience of the issue motivated further investigation through data science methodologies including exploratory data analysis and graphical visualizations. Instead of precipitously employing state-of-the-art neural networks, he conducted a measured investigation by applying interpretable methods like logistic regression and k-nearest neighbors, and only proceeding with more complex models once these simpler approaches had been well considered. This prudent ordering is reflective of a mature researcher who makes empirical evidence the basis for choices in methodology.

Intellectual development for Om included active participation in seminars where ethical concerns in technology were discussed. Om knew that technical capability had to be fully matched by moral responsibility. Other particular strengths have been his reliability, a deep concern for his peers, and receptivity to critique. With this encompassing of technical skill, ethical awareness, and ability to cooperate with his colleagues, Om proves to be an excellent candidate for graduate study.

I hereby offer the strongest possible recommendation.

Sincerely

Dr. Priyang Bhatt
